

## Empower Workforce Mobility

# Accele Wireless™

Accele Wireless is a Web-based mobile government application that extends processing capabilities to the field for inspections, investigations, code enforcement, work orders, service requests, and more. It delivers direct, real-time access to data in an agency's database from a mobile device, dramatically increasing internal productivity and driving citizen satisfaction and rapid Return on Investment (ROI).

### Mobile Inspection Management and Research

Accele Wireless provides state and local government with a secure, mobile platform for managing important regulatory activities. The application manages inspection schedules, inspection data input and sign-off, and the creation of unscheduled inspections in the field. Accele Wireless provides field staff with direct, real-time access to the information they need to perform their daily tasks.

### Flexible Remote Office Capabilities

Accele Wireless has a store-and-forward mode for agencies that do not have wireless connectivity in the field. Inspectors can download inspection schedules in the morning and upload their results at the end of the day when they return to the office. If connectivity is limited, the application stores data locally in the portable device and syncs the information once connectivity is restored.

ESRI® ArcGIS Server is integrated into Accele Wireless, enabling mobile staff to locate inspections from an inspection list and view, edit, and add GIS data to inspection reports in the field.

### Convenient and Configurable

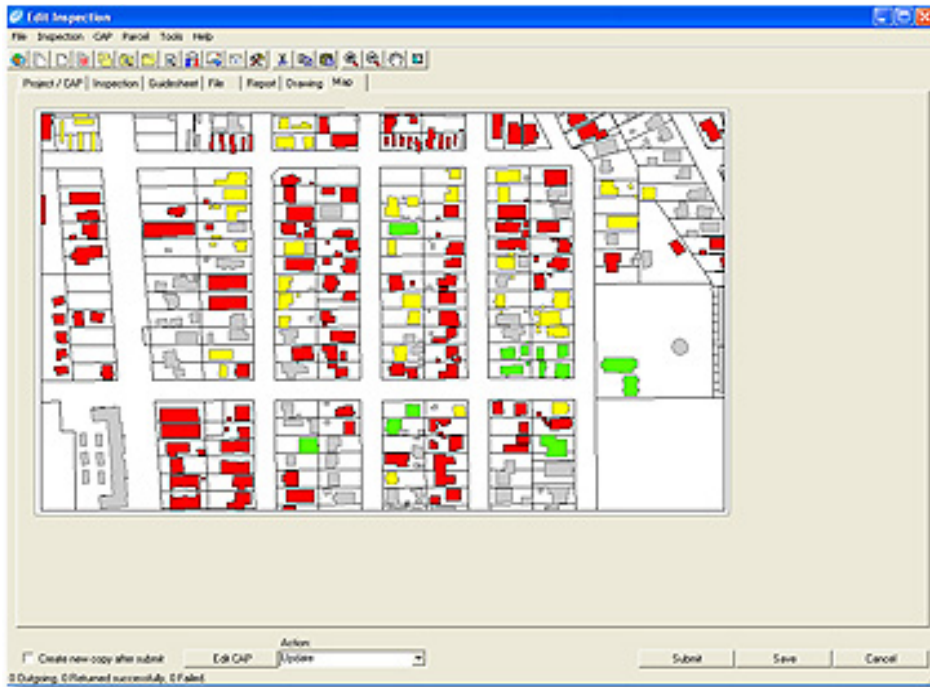

Accele Wireless streamlines workflow by providing information on a real-time basis. Any input from the field instantly updates the agency's primary database and is immediately available to anyone working in the system. It is configured to mimic an agency's inspection procedures including fields, comments, forms, etc., and the interface includes drop-down menus, standardized comments, and checklists that make it very easy for inspectors to collect data and complete their work.

### Additional Agency Benefits

- Eliminates duplicate data entry and increases data integrity
- Increases customer satisfaction by reducing the amount of time involved to complete the inspection process
- Provides excellent utility for tracking inspection activities (mileage, time spent, etc.)
- Saves an agency with 20 users up to 30 hours per day

*"Not only are we moving at five times the speed by using these products, we can upload the results daily for immediate totals and reporting. This is tied directly to our property database for future inspections and permitting, and in a GIS database for visual assessment of damage patterns. The benefits of this are obvious."*

**New Orleans, La.**  
Department of Safety and Permits  
following Hurricane Katrina

*Accela Wireless enables inspectors to view current parcel data by remotely accessing their land management database*

### Key Features

- Create new inspections or investigations
- Cancel, reschedule, or reassign field appointments
- Sign off inspections
- Utilize checklists
- Review case, application, or permit summary
- Correct and re-submit failed transactions
- Create new case, application, or permits with new inspection or investigation
- Customize labels
- Access multiple investigation or inspection lists
- Utilize offline capabilities when in a remote area
- Track inspection time and mileage
- Optimize travel routes for daily inspections or investigations
- Draw and attach sketches to cases and inspections
- Create and print reports in the field
- Utilize standard comments to save time

### Technical Specifications

- Built on the Microsoft .NET Framework 1.1
- Compatible with PDAs, laptops, Tablet PCs, and other devices running on Microsoft Pocket PC 2003, Windows Mobile 5, Windows 2000, or Windows XP operating systems
- Optimized for Intel® Centrino® Mobile Technology to facilitate data transfer and power management
- Integrated with ESRI® ArcGIS Server
- Cisco certified for compatibility and easy interoperability with networks built using Cisco equipment
- Tested with wireless mesh providers Cisco, Nortel, Strix Systems, and Tropos
