

## EMERGENCY RESPONSE SOLUTION

Accela Land Management™ can be enhanced with Accela GIST™ and Accela Wireless™ to create a powerful emergency response solution for your agency. Accela's Emergency Response Solution provides reliable and immediate access to information following a disaster so your agency can quickly assess damage and create a recovery plan. Accela's Emergency Response Solution gives your staff the immediate tracking, inspecting, and reporting capabilities needed to properly allocate resources and receive state and federal relief funds.

### GATHER INFORMATION QUICKLY

Accela's Emergency Response Solution allows your jurisdiction to track the number of structures damaged, types of damage, status of the building, and more. Inspectors can also tag buildings with the appropriate color codes (red, yellow, or green) based on the extent of the damage. By logging building status and dollar damage amounts into the system, your agency can immediately communicate accurate damage assessment statistics to government officials.

### MAXIMIZE TIME IN THE FIELD

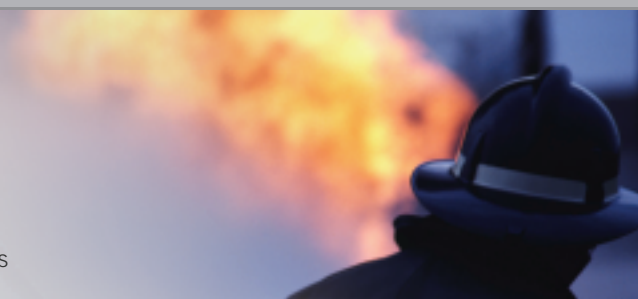

Utilizing mobile devices running Accela Wireless, emergency response teams report real-time data from the field, streamlining the damage assessment process and improving agency responsiveness. Inspectors can also create new inspections in the field as they come across other damaged structures that have not been reported yet.

### UPDATE GEOGRAPHIC DATA

Immediately following a disaster, your staff can access GIS maps of all buildings and structures in the damaged area. Field inspectors can then update these maps with damage assessment information and create up-to-date maps of damaged structures within a parcel of land. Using this information, your agency can focus its relief efforts based on maps showing the most heavily damaged areas.

## ENTERPRISE SOLUTIONS

### EMERGENCY RESPONSE SOLUTION

Accela solutions consist of Accela Automation modules and add-on products that are combined to deliver a powerful application for your agency.

#### Accela Land Management

Manages all land use and community development activities—permits, inspections and reviews, zoning, project plans, and code enforcement.

#### Accela GIS

Gives staff direct access to view geographic representations of all land use, zoning, and infrastructure information associated with a parcel, permit, inspection, or plan.

#### Accela Wireless

Delivers an effective mobile government application that extends inspection management capabilities to the field for inspections, code enforcement, work orders, service requests, and more.

#### Features

- Track the number of buildings damaged in a disaster
- Tag building status with red, yellow, or green codes using drop-down menus
- Calculate the total dollar amount of damage from the disaster
- Create and print maps of the damaged area
- Utilize off-line capabilities when in remote areas or when encountering wireless service issues
- Create new inspections in the field
- Auto-route information and tasks to different departments and agencies
- Generate daily task lists for emergency response teams
- Attach and retrieve CAD drawings, photographs, and other document files
