

SOLUTION OVERVIEW

Accela Civic Application™ for Cannabis and Hemp Regulation

Navigate regulatory nuances with a cannabis and hemp regulation software solution that scales and grows with you.

Ensure the successful regulation of cannabis and hemp businesses

Cannabis regulation and cannabis licensing management is a complex regulatory landscape, requiring a coordinated approach between states, local government, and businesses. New mandates — along with increasing media and public attention — are placing added pressure on governments to move quickly and cost-effectively while also ensuring full compliance to protect public safety.

Benefits

Stay on top of emerging regulations

Manage evolving policies and changing regulations with a flexible and easily configurable solution that can easily adapt.

Make data-driven, efficient decisions

Centralizing your program data corrects siloed reporting, eliminates duplicative information, and enhances decision-making with deep analytics.

Strengthen compliance and enforcement

Mobile-based inspection tools save time in the field, allowing inspectors to complete more inspections, ensuring greater oversight and enforcement of cannabis businesses.

Integrate with external systems

Accela's open API allows state agencies to integrate seamlessly with third-party technology, such as cannabis track-and-trace (seed-to-sale) systems or medical patient registries, as well as hemp cultivation data to verify cultivators are legal and licensed. Our APIs also allow local agencies to integrate with state licensing systems to verify an applicant's license status.

Accela® Cannabis Regulation empowers states to automate and streamline issuing licenses, conducting investigations and hearings, and processing renewals and transfers. Leveraging data and advanced technology, the solution empowers all cannabis regulatory procedures and needs, including working with local agencies and third-party systems.

Accela Cannabis Regulation also assists cities, towns, and counties with cannabis oversight by automating licensing, inspection, and enforcement tasks for local cannabis businesses.

State agencies that oversee hemp cultivation and processing are tasked with licensing and regulating business operations, reviewing planting reports and test results, and addressing complaints or non-compliance issues. With Accela, agencies can monitor and track the cultivation, storage, transportation, and disposition of hemp crops.

State Hemp Regulation

Accela simplifies the licensing, inspection and oversight for hemp cultivation and processing

Agencies that oversee hemp cultivation and processing are tasked with licensing and regulating business operations, reviewing planting reports and test results, and addressing complaints or non-compliance issues.

Maintain Oversight

Accela delivers a wealth of information agencies can use to maintain oversight of hemp operations in their state. With Accela, agencies can monitor and track the cultivation, storage, transportation, and disposition of hemp crops. With a powerful set of reporting tools available, agencies can quickly see the number of licensed growers or processors of hemp, number of acres currently planted, number of acres planned, locations planted, infractions, citizen complaints, or other valuable information.

Features

Empower residents and businesses with extensive, multilingual online services, including accepting applications, renewals, documentation, complaints, and requests for information through an easy-to-navigate website

Customers can access their portal account in real time and receive text and email alerts with status updates throughout the review process

Automatically publish relevant, up-to-the-minute data—such as number of active licenses or applications, or a map of establishments for media, public and department stakeholders to access

Intelligent workflow routing, automatic notification, and concurrent online plan and document review with instant staff and leadership visibility and overall efficiency

Securely store and access license applications, fingerprint applications, certifications, voluntary agreements and other critical files

Modern, integrated mobile apps allow field inspectors to collect critical data, photos, field locations, and documents with the ability to share everything with the office and other agents

Inspector access to facility, inspection, and compliance history

GIS integration allows precise hemp farm and field location data and support data analysis and visualization
