At Accela we view security as a joint effort between ourselves and customers, ensuring that together, we can create and implement technologies, policies, and operational procedures that provide the highest degrees of security.

**Security Controls**
Accela maintains a broad set of controls and strict policies across the areas of people, process, and technology. These include:
- Application security
- Data security
- Secure software and delivery lifecycle
- Audit and accountability
- Business continuity
- Change and configuration management
- Data Center and Infrastructure as a Service (IaaS) security
- Encryption in transit and at rest
- Threat, vulnerability, and risk management
- Identity and access management
- Mobile security
- Endpoint management
- Incident management and response

**Software Development**
Our security starts with adherence to software development lifecycle with security at its core. It begins with requirements, design, and coding, and ends with robust testing, deployment, and support.

This process is infused with operations such as code reviews, functional testing, penetration testing, through to incident response plans to ensure we have considered every aspect of security for our customers, from the creation of our software through to implementation and usage of our solutions.

**Partner Certifications**
Partners are critically important to the development and implementation of Accela software. We ensure our partners have the highest levels of security and compliance to maximize value to our customers.

Government agencies are becoming more reliant on the convergence of information and technology to reach performance goals.

A commitment to information security is more important now than ever before to provide secure, streamlined processes and help enable the experiences customers expect.
Our SaaS offerings are provisioned using the Microsoft Azure cloud infrastructure. This strategic partnership provides significant benefits for our customers, including multi-layered security that extends to physical datacenters, structure, and operations. Our Azure cloud infrastructure also provides high levels of security certifications, which are shown at right.

**Conclusion**

At Accela, security and compliance are what we call our brilliant basics, meaning a core aspect of how we operate and function. It is where we invest heavily, in people and other resources, and ensure it is always strong, consistent, and providing value to our customers.

These brilliant basics support Accela’s mature security and compliance program designed to engage with and meet the requirements of the security programs of our customers.
